SecureSMART

Block Email Threats Before They Reach Your Network— Make Downtime a Thing of the Past.

Comprehensive and reliable email protection

FuseMail® provides a fully-integrated email security, continuity and archiving cloud-based solution. It protects your organization from advanced email threats and accidental or malicious data leakage via email, in the office or on the road, no matter the device.

FuseMail® has protected corporate email for over **20 years**. Serving more than **25 million** mailboxes from data centers in **6 countries**, FuseMail® is highly reliable, guaranteeing 100% service availability. FuseMail®: a business unit of Nasdaq-listed j2 Business Cloud Services (JCOM).

Now you can easily control what data leaves your organization via email, and protect against data loss with multi-level policy enforcement and compliance. You can utilize custom-built trigger lists to alert HR, IT, Sales or Senior Management when specific content is sent.

Continuity: Protection when it matters most

An email outage can wreak havoc upon your business. Our **SecureSMART Suite** email continuity solution will ensure that your company's email stays operational. Users can log in to a browser-based portal from anywhere in the world and continue to send and receive emails. Whether they're in the office or on the road, users can continue to email from any device with an internet connection, even if your primary email systems are unavailable.

Reporting: Real time monitoring

Our industry-leading reporting system monitors the status of inbound and outbound email messages and can provide quarantine summaries on an hourly, daily, or weekly basis, as specified by your administrator. You can view and schedule reports showing the total amount of emails blocked by domain, as well as top senders and recipients.

SecureSMART and SecureSMART Suite

SecureSMART provides you with all of the features and benefits of SecureSMART Suite, with two exceptions: Always-On Email Continuity is not included, and Email Replay is 14 Days instead of the 90–Days you get with SecureSMART Suite. You can upgrade your package at any time to add these additional features or any of our products and services, which include email archiving.

FuseMail® the perfect supplement for Office 365

The proliferation of Office 365 does bring up the question of how safe and secure the system is. Why even run the risk? Use SecureSMART to enhance the power of Office 365 even further and keep your business free from email threats.

Why You Need SecureSMART

Platform independent, works with any email client or server - Microsoft Outlook, Lotus Notes, Office 365 and Google Apps.

Multiple levels of spam, virus and phishing protection.

Import allow and deny lists from your legacy system using CSV - reduce unnecessary administration during set-up.

As much or as little end user control over email as you choose.

Large file handling – allows an email over the file size limit through to the end user without the attachment, the end user then decides if they want to download it from the cloud.

Over 99.9% of spam identified and quarantined – reduces wasted staff time and improves productivity.

Fully supported by an award winning team.

Prevent data leakage (customer data, sensitive business information) through the use of multi-level account rules.

Set up rules to govern domains, groups or individual policies.

Customizable portal branding to ensure employee confidence in the system.

FuseMail Email Logs

Our partners tell us they are the best on the market; easy to use without compromising on functionality. All emails are available instantly meaning you can track, trace and take action in real time. Use them to monitor what has happened to every email your organization has sent or received over the last 90 days. Go back and check quarantined messages from up to 90 days ago and preview them in your browser. Use the FuseMail Portal to see all types of email including spam, virus, clean in one search view.
